

Hatch Cover Sealing Profiles

These rubber or elastomeric sealing profiles are designed for hatch cover systems. The components provide a weatherproof and watertight seal for hatches and access points in marine or industrial applications.

Product Overview

High-Performance Sealing Solutions

These hatch cover sealing profiles are engineered to provide reliable, weatherproof, and watertight seals for critical access points in marine and industrial environments. Crafted from durable, weather-resistant elastomeric compounds, these profiles are designed to withstand harsh conditions while maintaining structural integrity. The range includes various geometries, such as rectangular and trapezoidal shapes, specifically developed to optimize compression and sealing performance under load.

Technical Specifications

Available Geometries

- Rectangular profiles
- Trapezoidal profiles
- Custom profiles with internal cavities

Primary Applications

Marine Hatch Covers • Industrial Access Points • Watertight Sealing • Weatherproofing

Material Composition

EPDM, Neoprene, Weather-Resistant Rubber
