

HDPE PP Pipe Production Line

This HDPE and PP pipe production line is designed for manufacturing high-quality plastic pipes. It features a robust extruder with a precise feeding system, ensuring consistent material flow.

Product Overview

High-Efficiency Pipe Manufacturing Solution

This HDPE and PP pipe production line is engineered for high-quality plastic pipe manufacturing, featuring a robust extruder with a precise feeding system for consistent material flow. The integrated system includes a vacuum calibration unit for accurate sizing, a cooling tank for efficient solidification, and a haul-off unit for controlled pulling. Designed for reliability and high output, it supports various pipe diameters and wall thicknesses with a user-friendly control panel for precise monitoring.

Technical Specifications

Production Line Components

- Robust Extruder
- Precise Feeding System
- Vacuum Calibration Unit
- Cooling Tank
- Haul-off Unit
- Cutting Machine
- Control Panel

Compatible Materials

HDPE, PP

Performance Metrics

Monitored Parameters

Extrusion Speed • Temperature • Pressure
