

HDPE PP UPE Plastic Bearings with Glass Balls

These plastic bearings are made from HDPE, PP, and UPE. They offer excellent resistance to acids and alkalis and utilize glass balls.

Product Overview

High-Performance Plastic Bearings

These specialized bearings are crafted from high-quality HDPE, PP, and UPE materials, designed for demanding industrial environments. They offer excellent chemical resistance and low friction, making them an ideal choice for applications where traditional lubrication is not desirable or possible. Their reliable operation makes them well-suited for use in corrosive environments and food processing equipment.

Material Composition

Material Types	HDPE, PP, UPE
Rolling Element Material	Glass Balls

Performance Features

Key Benefits

- Excellent chemical resistance
- Low friction operation
- Lubrication-free performance
- Corrosion resistant

Application Areas

Recommended Industries

Food Processing • Corrosive Environments • Specialized Industrial Machinery
