

Heat Exchanger Plate

Heat exchanger plates are essential components in plate heat exchangers. These plates are available in various materials and patterns to suit different applications.

Overview

High-Efficiency Heat Exchanger Plates

These high-efficiency heat exchanger plates are engineered for optimal thermal transfer in demanding HVAC&R systems. Featuring a specialized corrugated surface design, they maximize surface area and fluid turbulence to significantly enhance heat exchange performance. Constructed from durable, corrosion-resistant materials, these plates ensure long-lasting reliability in industrial cooling, heating, and process fluid temperature control applications.

Performance Features

Recommended Applications

- HVAC&R Systems
- Industrial Cooling
- Heating Systems
- Process Fluid Temperature Control

Key Design Features

Corrugated Surface, High Turbulence, Corrosion Resistant, Leak-Proof Gasket

Available Models

Available Model Series

Series ID

GAL200B

MAT200A

GAL150A

GAL150B

GAL100A
