

Heat Recovery VRF System

This high-efficiency heat recovery VRF system is designed for commercial applications, providing simultaneous heating and cooling. Its modular design allows for flexible installation and energy-saving operation.

Overview

Advanced Climate Control Solution

This latest generation heat recovery VRF system is engineered for high-performance commercial environments. It enables simultaneous space heating and cooling, ensuring optimal comfort management across different zones. The system also supports sanitary hot water supply and offers extensive compatibility with third-party DX coils and air curtains.

Core Features

System Capabilities

- Simultaneous heating and cooling
- Sanitary hot water supply
- Compatible with 3rd party DX coils
- Compatible with air curtains

Technology Highlights

Heat Recovery, VRF, Inverter Technology, Modular Design

Performance Metrics

Key Performance Indicators

1 Yes

Simultaneous Mode

1 Yes

Hot Water Support
