

Heat Resistant Safety Gloves

These heat-resistant gloves are designed to protect hands from high temperatures. They feature reinforced stitching, a reflective outer layer, and a comfortable inner lining and are commonly used in welding, foundries, and industrial settings.

Product Overview

Professional Heat Protection

These heat-resistant safety gloves are engineered to provide superior protection in demanding industrial environments such as foundries and welding stations. Featuring a specialized reflective outer layer, they actively deflect high temperatures to prevent burns and injuries. The design prioritizes both worker safety and operational efficiency by combining reinforced stitching for durability with a comfortable inner lining for extended wear.

Key Features

Comfort and Ergonomics

- Comfortable inner lining
- Excellent dexterity for precision tasks

Protective Features

Heat Deflection, Reflective Outer Layer, Reinforced Stitching, High Temperature Resistance

Applications

Recommended Industries

Industrial Manufacturing • Foundry Operations • Welding
