

Heavy Capacity Industrial Workshop

This heavy capacity industrial workshop is designed for manufacturing or assembling large-scale engineering components. The workshop is equipped with heavy machinery and structural supports, indicating a facility designed for handling substantial loads and complex fabrication processes.

Overview

Heavy Capacity Industrial Workshop

This heavy capacity industrial workshop is engineered for the fabrication and assembly of large-scale engineering components. Designed to handle substantial loads, the facility supports complex manufacturing processes such as the production of large-capacity pressure vessels and storage tanks. It provides the necessary infrastructure and structural support required for high-precision, heavy-duty industrial projects.

Operational Capabilities

Handling Capacity

Heavy Duty • Large-Scale Fabrication • Overhead Crane Support

Primary Applications

- Pressure vessel manufacturing
- Large-capacity tank assembly
- Chemical processing equipment
- Energy storage component fabrication
