

# Heavy Construction Equipment for Lifting and Digging

This heavy-duty construction machinery is designed for lifting, digging, and moving materials. It features a robust chassis, hydraulic lifting system, and durable forks for handling heavy loads.

## Overview

### Heavy-Duty Construction Machinery

This heavy-duty construction machinery is engineered for efficient lifting, digging, and material handling tasks. Featuring a robust chassis and a powerful hydraulic lifting system, it provides the reliability needed for demanding industrial environments. Equipped with durable forks, this versatile equipment is an ideal solution for construction sites and warehouse operations.

## Technical Specifications

### Rated Load Capacity

**250 kg**

Rated Capacity

### Primary Applications

Construction Sites, Warehouse Operations, Industrial Material Handling

## Features

### Equipment Highlights

- Robust chassis design for durability
- Advanced hydraulic lifting system
- Heavy-duty forks for material handling
