

Heavy-Duty AC Electric Motor

This electric motor is designed for heavy-duty applications. It features a cast iron frame for durability and vibration resistance, ensuring reliable performance in demanding industrial settings.

Overview

Industrial Performance

The Y2KQ160-355 series heavy-duty AC electric motor is engineered for high-performance industrial environments requiring sustained reliability. Constructed with a robust cast-iron frame, this motor offers exceptional vibration resistance and structural integrity. Its enclosed design ensures protection against environmental hazards, making it an ideal solution for driving heavy machinery such as industrial pumps and compressors.

Construction

Housing Material	Cast Iron
Enclosure	Fully Enclosed

Series Information

Series Model	Y2KQ160-355
Common Applications	Pumps, Compressors, Industrial Machinery
