

Heavy Duty Air Casters for Load Transport

Air casters offer ease of handling for loads of any size or shape. They are designed for effortless movement of heavy loads using air bearings.

Overview

Heavy Duty Air Caster System

These heavy-duty air casters provide a versatile and efficient solution for transporting large, heavy machinery and equipment. Utilizing advanced air bearing technology, the system allows for the smooth and effortless movement of loads weighing over ten tons, regardless of size or shape. Each system includes a comprehensive control console and high-lift air bearings designed for precise maneuvering in industrial environments.

Performance & Capacity

Load Capacity

10 tons

Minimum Load Capacity

System Components

Included Accessories

- Control console (4 or 6 button configuration)
- High lift air bearings
- Remote control system

System Features

Air Bearing Technology, Remote Control Operation, Modular Design, High Lift Capability

Experience & Reliability

Industry Experience

1998 Established

Global Reach

Exporting to more than 50 countries and areas
