

Heavy-Duty Alloy Wheel

This alloy wheel is designed for heavy-duty applications with a maximum load weight of 4000KG. It features durable construction and precision engineering for optimal performance.

Product Overview

Heavy-Duty Performance

This 22.5-inch alloy wheel is engineered for heavy-duty applications, providing optimal load-bearing capacity for commercial vehicles and trailers. Its durable construction and precision engineering ensure reliable performance even under the most demanding road conditions. The polished finish not only enhances the vehicle's aesthetics but also reflects the high-quality manufacturing standards used to create this essential component.

Technical Specifications

Key Dimensions

22.5 inch
Wheel Size

335 mm
PCD

PCD Configuration

10*335
