

Heavy-Duty Axle Assembly for Construction Machinery

This heavy-duty axle assembly is designed for loaders, excavators, and bulldozers. The robust axle features a rigid beam construction providing superior strength and durability for demanding construction environments.

Overview

Heavy-Duty Axle Assembly

Engineered for demanding construction environments, this heavy-duty axle assembly provides superior strength and durability for loaders, excavators, and bulldozers. The unit features a robust rigid beam construction designed to withstand high loads and provide optimal performance in challenging off-road conditions. Integrated with reliable drum brakes and precision steering components, it ensures both safety and enhanced maneuverability for heavy machinery operations.

Technical Specifications

Compatible Machinery	Loaders, Excavators, Bulldozers
Design	Rigid beam construction
Braking System	Heavy-duty drum brakes

Performance Features

Performance Highlights

- High load capacity
- Off-road durability
- Precision steering components
- Reliable stopping power
