

Heavy-Duty Brake Drum for Braking Systems

This heavy-duty brake drum is designed for braking systems. It features robust construction with a machined inner surface for optimal friction and heat dissipation.

Product Overview

Heavy-Duty Braking Performance

This heavy-duty brake drum is engineered for demanding braking applications, providing consistent and reliable performance. Constructed from high-quality materials, it features a machined inner surface designed to optimize friction and heat dissipation. The unit is built for durability with a corrosion-resistant outer coating and precision-drilled mounting flanges for secure installation.

Technical Specifications

Construction Details

- Machined inner friction surface
- Durable outer corrosion-resistant coating
- Integrated mounting flange
- High-strength material composition

Model Number

3602B

Key Features

Heavy-Duty, Heat Dissipation, Corrosion Resistant, Precision Machined

Performance Metrics

Performance Highlights

1 Optimized

Heat Dissipation Efficiency

1 High

Wear Resistance
