

# Heavy-Duty Brake Lining

This heavy-duty brake lining is designed for industrial and automotive use. It features a durable composite material with ventilation holes, providing high friction and heat resistance for reliable braking in trucks and trailers.

## Product Overview

### Industrial-Grade Braking Performance

This heavy-duty brake lining is engineered for demanding industrial and automotive environments, including trucks, trailers, and heavy vehicles. Constructed from a durable composite material, the component is designed to withstand high friction and extreme heat. It features a precision-drilled design to facilitate ventilation and ensure secure attachment for consistent, reliable braking performance.

## Technical Specifications

### Key Performance Features

- High friction coefficient
- Heat resistance
- Ventilated design
- Secure attachment points

<b>Material Composition</b>	Durable composite material
<b>Primary Applications</b>	Trucks, Trailers, Heavy Vehicles, Industrial Machinery
