Product Overview

Heavy-Duty Brake Shoe Engineering

This high-performance brake shoe is engineered specifically for heavy-duty applications, prioritizing both safety and operational longevity. Constructed with a robust steel backing plate and securely riveted friction material, it ensures consistent stopping power under demanding conditions. Designed for a precise fit, this component meets or exceeds industry standards for reliability and service life.

Manufacturing Excellence

Industry Standards & Capabilities

The manufacturing facility operates as a national high-tech enterprise with a state-recognized technology center. Established in 1970, the facility spans 1,250,000 square meters and employs over 800 personnel, including a dedicated team of more than 200 technical experts. This infrastructure allows for comprehensive, independent technical testing to ensure product quality.
