

Heavy-Duty Concrete Pump

This heavy-duty machinery is designed for demanding industrial applications. It is equipped with a large hopper for efficient material handling and a versatile boom for precise placement.

Overview

High-Performance Concrete Pumping Solution

This heavy-duty construction machine is engineered for demanding industrial applications, offering robust performance in challenging environments. It features a high-capacity pumping system and a large hopper for efficient material handling, supported by a versatile boom for precise concrete placement. Designed with a rugged chassis and heavy-duty tires, it provides exceptional stability and maneuverability on rough terrain.

Performance Highlights

1 Ready

Operational Status

Primary Applications

Concrete Pumping, Shotcrete Application, Industrial Construction

Technical Features

Key Features

- Powerful engine for demanding workloads
- High-capacity pumping system
- Large hopper for efficient material handling
- Versatile boom for precise placement
- Advanced control system for smooth operation
- Rugged chassis and heavy-duty tires

Terrain Capability

Rough Terrain • Industrial Grade
