

Heavy-Duty Conveyor Roller for Material Handling

This heavy-duty conveyor roller is designed for demanding material handling applications. It features a robust cylindrical drum construction with a durable outer layer, reinforced with evenly spaced support rings.

Overview

Heavy-Duty Material Handling

This heavy-duty conveyor roller is engineered for demanding material handling environments, including mining, aggregate, and industrial conveying systems. It features a robust cylindrical drum construction with a durable outer layer and reinforced support rings to ensure long-term reliability. Equipped with a precision bearing assembly and heavy gauge steel end caps, this component delivers smooth and consistent performance under heavy loads.

Physical Construction

End Cap Finish

Red

Drum Construction

Cylindrical with reinforced support rings

End Cap Material

Heavy gauge steel

Performance & Application

Key Features

- Precision bearing assembly
- Reinforced support rings
- Durable outer layer
- Heavy-duty drum design

Suitable Industries

Mining, Aggregate, Industrial Conveying
