

Heavy-Duty Double Girder Overhead Crane

This heavy-duty crane features a robust structural design with dual girders for enhanced load capacity and stability. It is equipped with a high-capacity hoist and multiple lifting points for versatile material handling.

Overview

Heavy-Duty Double Girder Overhead Crane

This heavy-duty double girder bridge crane is engineered for demanding industrial lifting applications, offering superior stability and load capacity. Its robust dual-girder structural design ensures long-term reliability in manufacturing plants, warehouses, and construction sites. Equipped with advanced control systems and a high-capacity hoist, it provides smooth, precise movement for safe and efficient material handling.

Performance Metrics

Lifting Capacity

540 t

Maximum Load

Technical Details

Key Design Features

- Double girder structural design
- High-capacity hoist system
- Multiple lifting points
- Advanced control system for precise positioning

Suitable Applications

Manufacturing Plants, Warehouses, Construction Sites
