Product Overview

Heavy Duty Load Moving Skates

These heavy-duty load moving skates, also known as machinery movers or roller dollies, are engineered for the efficient transport of industrial equipment. Featuring a rotating top for enhanced maneuverability and steering, they provide a reliable solution for moving heavy loads in warehouses and manufacturing environments. The system is designed for durability and flexibility, offering multiple wheel material options to suit specific flooring and load requirements.

Technical Specifications

Available Configurations

- Straight roller skate
- Veered roller skids
- Steerable machine skate
- Crawler type load roller skate
- 360-degree veered load skids

Performance Characteristics

High Capacity • Long Working Life • Rotating Top • Heavy Duty

Wheel Material Options

Polyurethane, Steel, Nylon

Steel Wheel Advantages

Steel wheel roller dollies provide superior load capacity and extended operational lifespan.
