

Heavy-Duty Mining Excavator

This robust mining excavator is designed for heavy-duty excavation and material handling in mining operations. It features a large-capacity bucket with reinforced teeth for efficient digging and loading of ore and other materials.

Overview

High-Performance Hydraulic Excavator

This 120-ton hydraulic excavator is engineered for demanding mining operations, offering exceptional control, reliability, and rapid excavation capabilities. Designed with operator comfort and maintenance efficiency in mind, it features advanced filtration systems and centralized lubrication. The machine is highly adaptable, supporting various optional configurations such as specialized arms and safety systems to meet diverse site requirements.

Technical Specifications

Operating Weight	120 ton
------------------	---------

Maintenance & Reliability

Maintenance Features

- Metal fuel prefilter
- Exhaust dust ejection technology
- Lincoln single-wire central lubrication system
- Convenient inspection access

Optional Configurations

Special Working Devices

Extended arm • Rock arm

Available Upgrades	Automatic fire extinguishing system, Quick fuel filling, Oil sampling port, Low temperature start, Full protection fence
