

# Heavy Duty Moving Rollers

These heavy-duty moving rollers facilitate the transport of heavy loads in industrial environments. Constructed with a robust steel frame and durable rollers, they ensure stability and smooth operation.

## ADDITIONAL IMAGES

## Product Overview

### Heavy Duty Machinery Movers

These heavy-duty moving rollers, also known as steel chain roller skids or machinery movers, are engineered for the efficient transport of oversized equipment. Designed for durability and safety, these units are capable of handling loads ranging from 1 ton to over 2000 tons. They are suitable for various environments, including cement floors, construction sites, and industrial outdoor areas, providing a reliable solution for heavy-duty material handling.

## Performance & Capacity

Load Capacity	1 ton to 2000+ tons
Movement Features	Straight line motion, Swivel attachment compatible, Dual-directional operation

## Construction & Design

Material	High-strength steel
Service Life	10+ years

## Applications

### Suitable Environments

- Cement floors
- Construction sites
- Industrial outdoor areas
- Manufacturing facilities

## Customization

Customization	Yes
