

Heavy-Duty Road Roller for Compaction

This road roller is designed for efficient soil compaction and asphalt paving. It features a smooth drum and a powerful engine for reliable performance on road construction projects.

Overview

RM186 Series Overview

The RM186 series road roller is a heavy-duty construction machine engineered for superior soil compaction and asphalt paving. Featuring an advanced hydraulic system paired with a high-efficiency engine, this roller ensures excellent performance and reliability for large-scale infrastructure projects. Its ergonomic cabin design and streamlined maintenance access provide operators with comfort and efficiency, making it an optimal choice for highways, airports, ports, and dams.

Performance

Performance Metrics

186 Model

Series Model

Typical Applications

Highways, Airports, Ports, Dams, Soil Compaction, Asphalt Paving

Technical Specifications

Key Features

- Advanced hydraulic system for precise maneuverability
- High-efficiency, renowned-brand engine
- Ergonomic cab with large-area glass for wide visibility
- Streamline rear-open hood for convenient maintenance
- Advanced braking system for enhanced safety

Safety & Operation

Safety Compliance

Advanced Brake System • Safe Operation Design
