

Heavy Duty Roller Skids for Equipment Moving

These machinery skates facilitate efficient transport of heavy equipment. Their robust design reduces the time needed to move equipment.

Product Overview

Industrial Equipment Moving Solutions

These heavy-duty roller skids are engineered to optimize the transport of industrial machinery and equipment, significantly improving operational efficiency. The system features a range of versatile options, including three-point moving skates, steel chain rollers, and rotating dollies that allow for 360-degree maneuverability. Designed to protect floor surfaces while handling substantial loads, these moving skates provide a reliable and safe solution for complex warehouse or factory logistics.

Technical Capabilities

Available Configurations

- Three-point moving skates
- Steel chain roller skates
- Rotating moving dollies
- Veered moving skates

Maneuverability

Straight line, 360-degree rotation, Veered steering

Performance Features

Key Performance Metrics

360 degrees

Steering Angle

Floor Protection

Yes
