

Heavy Duty Roller Skids for Material Transport

These roller skids are designed for straight-line movement of heavy materials. For directional changes, additional machinery skates may be required.

Product Overview

Heavy Duty Roller Skids

These heavy-duty roller skids are engineered for the efficient transport of substantial loads across diverse industrial environments. Featuring a robust steel frame and a specialized roller system, they provide stability and smooth movement for machinery relocation and warehouse operations. Designed for versatility, they are suitable for use on cement floors, outdoor building sites, and general industrial settings.

Application & Usage

Suitable Environments

Cement Floors, Building Sites, Outdoors, Industrial Facilities, Warehouses

Design & Construction

Key Features

- Robust steel frame construction
- Multiple roller configuration for stability
- Integrated top plate for secure load attachment
- Designed for heavy machinery relocation
