

Heavy-Duty Slurry Pump

This heavy-duty slurry pump is designed for handling abrasive and corrosive materials found in mining and industrial applications. Its robust construction includes a replaceable liner and impeller for pumping slurries with high solids content.

Overview

Heavy-Duty Slurry Pump

This heavy-duty slurry pump is engineered specifically for the rigorous demands of mining, dredging, and industrial processing. It excels at transporting abrasive and corrosive materials, even those characterized by high solids content and large particle sizes. Built for longevity and performance, the unit features robust construction with easily replaceable wear components, ensuring high efficiency and a long service life in the most challenging operational environments.

Technical Specifications

Model Identifier	100ZJ-42
Suitable Applications	Mining, Dredging, Industrial Processing

Design Features

Durability & Wear Resistance

- Robust heavy-duty construction
- Replaceable wear-resistant liner
- Replaceable high-durability impeller

Performance

Operational Capabilities

High Efficiency • Handles Abrasive Materials • Handles Corrosive Materials • High Solids Content Handling
