

Heavy-Duty Steel Garden Fork

This heavy-duty steel fork is designed for efficiently handling various materials in agricultural and gardening tasks. Its robust construction and four sharp tines make it suitable for lifting, turning, and moving items such as hay, compost, or manure.

Product Overview

Professional Heavy-Duty Garden Fork

The F114 model is a high-performance garden fork engineered for demanding agricultural and landscaping environments. Its robust steel construction provides exceptional resistance to bending and breakage, ensuring reliability during intensive lifting and material-turning operations. This tool is specifically optimized for efficient handling of materials such as compost, hay, and manure.

Technical Specifications

Number of Tines	4
Material	Heavy-duty steel
Primary Applications	Agriculture, Landscaping, Composting, Material Handling

Features

Key Benefits

- Robust steel construction for longevity
- High resistance to bending and load stress
- Designed for heavy-duty professional tasks
- Optimized tine geometry for efficient material penetration
