

Heavy-Duty Vehicle Brake Lining

This brake lining is designed for heavy-duty vehicles, offering high strength and abrasion resistance. It provides reliable braking performance, safety, and a long service life while conforming to environmental protection requirements.

Overview

High-Performance Heavy-Duty Brake Lining

Engineered for demanding commercial and industrial applications, these brake linings utilize a specialized formula to deliver high strength and superior abrasion resistance. Designed for safety and reliability, they operate without noise or pollution and are completely asbestos-free to meet modern environmental standards. Their excellent thermal recession and recovery performance makes them ideal for challenging environments, including mountainous terrain and high-speed, high-temperature conditions.

Performance Features

Environmental Standards

Eco-Friendly • Non-Polluting • Asbestos-Free

Key Performance Benefits

High Abrasion Resistance, Noise-Free Operation, Asbestos-Free, Thermal Recovery, Long Service Life

Technical Specifications

Application Suitability

- Heavy-duty vehicles
- Mountain road driving
- High-speed conditions
- High-temperature environments

Braking Performance

100 %

Wear Resistance

100 %

Thermal Stability
