Product Overview

Professional Heavy Duty Wheel Hub

This high-grade wheel hub is engineered for robust performance and durability in heavy-duty automotive applications. It is specifically designed to ensure optimal wheel alignment and smooth rotation, providing reliable support and stability for the wheel assembly. Featuring precision-machined bolt holes and a corrosion-resistant finish, this hub is built for long-term service life in demanding environments.

Technical Specifications

Material Characteristics

- Cast iron construction
- Flanged base design
- Corrosion-resistant finish

Supported Weight Capacities

12t, 14t, 16t

Design Standard

European/Germany Type

Mounting and Integration

Mounting Features

- Multiple bolt holes for secure mounting
- Internally threaded central bore
- Designed for bearing or axle integration
