

# Heavy Equipment Moving Skates with Rotating Platform

These machinery moving skates are designed for the professional and easy relocation of heavy-duty equipment. They allow for finer maneuvering when moving substantial loads.

## Product Overview

### Heavy-Duty Machinery Moving System

These professional-grade moving skates are engineered for the safe and efficient transport of heavy industrial equipment. Utilizing a stable three-point design, the system includes a steerable front unit with a vertical handle and two rear units connected by a steel tube. This configuration ensures maximum stability and maneuverability, allowing for precise positioning of loads ranging from 3 tons to over 1000 tons.

## Technical Specifications

### Load Capacity

<b>3 tons</b> Minimum Capacity	<b>1000 tons</b> Maximum Capacity
-----------------------------------	--------------------------------------

### System Components

- Front adjustable skate with vertical handle
- Two rear skates
- Connecting steel tube

### Design Features

Three-point system, Rotating platform, Steerable front unit, Adjustable rear connection

## Operational Details

<b>Maneuverability</b>	Steerable front unit with vertical handle for precise control
<b>Stability Configuration</b>	Triangular arrangement for optimal weight distribution
