Product Overview

Heavy-Duty Equipment Moving Solution

These heavy-duty load moving skates are engineered for the safe and efficient transport of heavy machinery and industrial equipment. Featuring a robust, low-profile design with multiple wheels, they provide exceptional stability and maneuverability across various floor surfaces. Designed for simplicity and ease of use, these skates allow for controlled movement without specialized training, making them an essential tool for professional moving operations.

Operational Features

Key Operational Capabilities

- Directional steering capability
- Floor protection design
- Can be operated without specialized training
- Modular usage (typically used in sets of three or more)
