

Heavy Equipment Skates

Heavy equipment skates are heavy-duty dollies used for moving substantial objects and equipment. Their low profile design allows for easy placement, and they utilize rollers or wheels for smooth movement.

Overview

Heavy-Duty Load Moving Skates

These heavy-duty load moving skates are designed for the safe and efficient transport of heavy machinery and industrial equipment. Featuring a robust steel frame and a low-profile design, they allow for easy placement under heavy loads while minimizing friction during movement. Ideal for manufacturing plants, warehouses, and construction sites, these skates provide a reliable solution for handling demanding logistical tasks.

Technical Specifications

Suitable Environments

- Manufacturing Plants
- Warehouses
- Construction Sites
- Industrial Settings

Construction Material

Robust Steel

Design Features

Low Profile, Non-slip Surface, Heavy-duty

Performance

Primary Function

Machinery and equipment transport
