Product Overview

Professional Construction Hoist System

This construction hoist is designed for high-rise buildings and major infrastructure projects, providing efficient vertical transport for personnel, materials, and equipment. Utilizing a motorized rack-and-pinion system, it ensures precise travel along mast sections for safety and reliability. The system features flexible configurations, including single-caged or double-caged setups, and supports both manual control and optional automatic positioning for streamlined operation.

Technical Specifications

Control Modes

- Manual Control
- Computer Automatic Positioning System (Optional)

Structural Components

Hoist Type	Standard Section Specs
Double-caged	4 pieces of $\varnothing 76 * 4$ seamless steel pipes
Single-caged	2 pieces of $\varnothing 51 * 4$ seamless steel pipes

Configuration Options

Single-caged, Double-caged

Safety & Performance

Safety Mechanisms

Wall-attaching Device • Self-erection Unit • Derrick included

Quality Standards

- Pre-delivery testing on specialized equipment
- High-performance motor and speed reducer
- Interchangeable standard sections
