

Heavy Machinery Moving Roller Skids

These transport dollies, also known as machine moving equipment, are designed for moving machinery. The machinery dollies feature a durable top surface and multiple rollers to distribute weight evenly.

Product Overview

Industrial Machinery Moving Skids

These heavy-duty roller skids are engineered to facilitate the efficient relocation of heavy machinery across industrial floors. Featuring a robust design with high-load distribution capabilities, these units ensure stable and smooth transport for equipment of various shapes and sizes. Their low-profile construction reduces the need for extensive lifting, allowing for superior maneuverability in restricted spaces common in manufacturing and warehouse environments.
