Product Overview

Professional Load Moving Solutions

These crawler-type roller skids are engineered for the safe and efficient transport of heavy machinery and industrial equipment. Featuring durable steel construction and specialized polyurethane wheels, they ensure smooth movement without damaging floor surfaces. With high-strength friction pads for stability and corrosion-resistant finishes, these skates are built for demanding industrial environments.

Technical Specifications

Load Capacity Range	1 T to 2000+ T
Wheel Material	Polyurethane
Floor Protection	Yes
Key Features	Powder-coated finish, Galvanized steel, Corrosion resistant, High-strength friction pad
Customization	Can be configured with two or more rollers based on demand
