

Helical-Bevel Gearmotors for Industrial Machinery

These helical-bevel gearmotors deliver efficient power transmission. Their design incorporates noise reduction technology and requires minimal maintenance.

Product Overview

High-Performance Helical-Bevel Gearmotors

These high-efficiency power transmission units are engineered for demanding industrial environments. By combining a helical gear stage with a bevel gear stage, the system delivers exceptional torque and precise speed control. Designed for reliability and longevity, these gearmotors offer a compact footprint and versatile mounting options suitable for various industrial automation and material handling applications.

Technical Specifications

Performance Range

200 kW

Max Input Power

62800 N.m

Max Output Torque

Model Series

37-187

Gear Ratio Range

3.98 - 197.37

Application & Features

Key Features

- High-efficiency power transmission
- Compact and robust design
- Versatile mounting configurations
- Extended service life

Suitable Applications

Conveying Systems, Packaging Machinery, Automation Equipment
