

Hematite Sample Grinding Bowl for Lab Use

This grinding bowl is used for preparing hematite lab samples. It is designed for use with laboratory sample preparation equipment.

Product Overview

Laboratory Sample Preparation

This grinding bowl is specifically designed for the preparation of hematite samples within a laboratory environment. Engineered for durability and precision, it serves as a critical component for sample grinding equipment. Its robust construction ensures consistent performance during the pulverization process, making it an essential tool for material analysis workflows.

Technical Specifications

Usage Context

Laboratory Use • Sample Preparation

Primary Application	Hematite sample preparation
Compatible Equipment	Laboratory sample grinding equipment
