

Hematite Sample Grinding Bowl

Grinding bowl used for hematite lab sample preparation. It is constructed from durable material to withstand repeated use and ensure minimal contamination of samples.

Product Overview

Precision Sample Preparation

This precision-engineered grinding bowl is specifically designed for the preparation of hematite laboratory samples. Constructed from high-quality, durable materials, it is built to withstand repeated use while ensuring minimal sample contamination. The smooth, uniform interior surface facilitates efficient and consistent grinding, making it an ideal choice for geological, metallurgical, and material science laboratory environments.

Technical Specifications

Design & Performance

- Uniform interior surface
- High-durability construction
- Minimal contamination design

Primary Applications

Geology, Metallurgy, Material Science, Lab Sample Preparation
