

Hematite Sample Pulverizing Bowl and Disc Set

Pulverizing bowls and discs are used for hematite lab sample preparation. These durable components are engineered for consistent and reliable performance in demanding laboratory environments.

Product Overview

Professional Laboratory Preparation

These pulverising bowls and discs are specifically engineered for high-precision hematite laboratory sample preparation. Designed for durability and performance in demanding geological and materials science environments, the set ensures consistent results and minimal contamination. This robust assembly includes a bowl, a specialized disc-shaped lid with an orange seal, and a central grinding element to facilitate accurate sample analysis.

Technical Specifications

Included Components

- Pulverising Bowl
- Disc-shaped Lid with Seal
- Center Grinding Element

Key Features

Minimal Contamination • High-Durability Construction • Consistent Performance

Primary Applications

Geological Testing, Mining Industry, Materials Science
