

High-Capacity Double-Suction Centrifugal Pump

This horizontally split case centrifugal pump is engineered for high-capacity water transfer and industrial use. It features a double-suction impeller to provide balanced hydraulic thrust and improved efficiency.

Overview

High-Capacity Double-Suction Centrifugal Pump

This horizontally split case centrifugal pump is engineered for high-capacity water transfer and demanding industrial applications. Featuring a double-suction impeller, it provides balanced hydraulic thrust and superior operating efficiency. Designed for durability and ease of maintenance, this unit allows for quick access to internal components, making it an ideal solution for water supply, irrigation, and process fluid transfer.

Technical Specifications

Design Type	Horizontally split case
Impeller Configuration	Double-suction

Key Features

Key Benefits	High Capacity, Balanced Hydraulic Thrust, Improved Efficiency, Easy Maintenance
--------------	---

Applications

Suitable Applications

- Industrial Water Supply
- Large-scale Irrigation
- Process Fluid Transfer
