

High Capacity Mineral Belt Feeder

This high-capacity belt feeder is designed for effective mineral processing. It features a robust frame and adjustable height, making it suitable for various mining applications.

Product Overview

High Capacity Mineral Belt Feeder

This high capacity mineral belt feeder is engineered for efficient material handling in demanding industrial environments. Designed as a short-length belt conveyor, it operates at low speeds, making it exceptionally well-suited for transporting powdery and granular materials. Its robust construction ensures continuous, reliable operation for mining, construction, and agricultural applications.

Technical Specifications

Conveyor Type	Short length belt feeder
Suitable Materials	Powdery material, Granular material, Mineral ores

Design Features

Mobility & Design

- Portable inclined design
- Robust frame construction
- Adjustable height mechanism
- Integrated receiving hopper
- Equipped with wheels for mobility

Safety & Operation

Safety & Operational Specs

Safety guards included • Continuous operation drive • Low speed operation
