

High-Capacity Rice Milling Plant

This high-capacity rice milling plant is engineered for efficient and high-volume rice processing. It incorporates interconnected machines and advanced control systems to optimize output and ensure reliable performance in large-scale milling operations.

Overview

High-Capacity Rice Milling Solution

This rice milling plant is engineered based on national standards, focusing on advanced technology and flexible processing capabilities. The system integrates electrical control, ventilation, and dust removal designs to ensure reliable performance and ease of maintenance. Designed for optimized investment, it offers a compact structure that reduces civil engineering costs while maximizing output efficiency.

System Features

Key Advantages

- Advanced, flexible process design
- Centralized control system for easy management
- Compact structure with short construction period
- Integrated dust removal system
- Reliable equipment performance

Design Scope

Process Design, Electrical Control, Ventilation, Dust Removal

Performance Metrics

Operational Efficiency

1 Centralized

Control System

1 Integrated

Dust Removal
