

High Definition TV Antenna

This is a high definition TV antenna with a gain of 7~10dB and an operation frequency range of 470~860MHz. The antenna supports HDTV, DVB-T/T2, and DTMB standards.

Overview

High Definition TV Antenna

This high-definition TV antenna is engineered for reliable signal reception across a wide frequency spectrum. Optimized for HDTV, DVB-T/T2, and DTMB standards, it provides professional-grade performance for clear broadcasting. Its robust design features stable impedance and low VSWR, ensuring signal integrity in various installation environments.

Technical Specifications

Signal Gain

7 dB Minimum Gain	10 dB Maximum Gain
-----------------------------	------------------------------

Frequency Range	470-860MHz
VSWR	1.5
Output Impedance	75 Ω

Compatibility

Supported Standards	HDTV, DVB-T, DVB-T2, DTMB
---------------------	---------------------------
