

High-Density Data Transfer Cable

This computer cable features a durable, dark-colored outer jacket for enhanced protection. Its core contains numerous individually insulated conductors with a speckled color pattern, ensuring reliable signal transmission.

Overview

High-Performance Data Connectivity

This high-density data transfer cable is engineered for reliable and secure signal transmission in demanding computer peripheral environments. Featuring a robust, dark-colored outer jacket, the cable offers enhanced durability and protection against external interference. The core is constructed with numerous individually insulated conductors, each marked with a distinct speckled color pattern to ensure precise and stable connectivity for critical data applications.

Physical Specifications

Design Features

- Robust dark-colored outer jacket
- Speckled color pattern on inner conductors
- Designed for computer peripheral applications

Cable Construction

High-density, Individually insulated conductors, Durable outer jacket

Manufacturing Details

Production Date Code

2006-06-27
