

High-Density Electrical Connector Assembly

This is a high-density electrical connector assembly with a robust rectangular housing. It includes cable harnesses with protective sheathing and strain relief mechanisms for secure connection.

Overview

High-Density Electrical Connector Assembly

This high-density electrical connector assembly is engineered for demanding environments requiring reliable, high-integrity signal transmission. Featuring a robust rectangular housing with multiple rows of gold-plated pins, it ensures superior conductivity and durability. The unit includes integrated cable harnesses with protective sheathing and strain relief mechanisms, making it an ideal choice for critical applications in aerospace or defense industries.

Technical Specifications

Connector Type	High-Density Rectangular
Contact Plating	Gold-plated
Mounting Style	Metallic Bracket Mount

Features

Application Suitability

Aerospace • Defense • Industrial

Key Features

High-density, Strain relief, Protective sheathing, High-reliability
