

High-Density Network Communication Device

This high-density network communication device is designed for rack mounting and complex network infrastructures. It provides a range of connectivity options through its various ports, ensuring reliable data transmission and network management capabilities.

Product Overview

High-Density Network Communication Device

This high-density network communication device is engineered for complex network infrastructures, offering a robust solution for enterprise-level applications. Featuring multiple interface modules with dedicated LED status indicators, it ensures reliable data transmission and comprehensive network management. Designed for standard rack mounting, this unit provides the high performance and scalability required for demanding connectivity environments.

Technical Specifications

Ideal For

Enterprise-level • High-density environments • Scalable networks

Mounting Type	Rack Mount
Status Indicators	LNK, ACT
