

High-Density Wool Polishing Wheel for Electric Tools

This high-density wool polishing wheel is designed for use with electric tools. It is ideal for achieving a smooth, polished finish on various materials, including metal, plastic, and composite surfaces.

Product Overview

Professional Polishing Performance

This high-density wool polishing wheel is engineered for superior performance with electric tools. Utilizing a specialized construction of carpet and chemical fiber winding, it offers a soft surface that facilitates easy adsorption of polishing agents. It is particularly effective when used with water-soluble cerium oxide powder to achieve a high-gloss finish on glass and other surfaces.

Technical Details

Composition	Wool, Carpet Fiber, Chemical Fiber
Surface Characteristics	Soft with high adsorption capabilities

Applications

Compatible Materials

- Glass
- Metal
- Plastic
- Composite surfaces

Recommended Polishing Medium	Cerium oxide powder (water-soluble)
------------------------------	-------------------------------------

Usage

Tool Compatibility

Electric Tools
