

High-Efficiency Monocrystalline Solar Panel

This high-efficiency solar panel is engineered for optimal energy conversion. Its monocrystalline cell structure enhances performance and ensures durability, making it suitable for residential and commercial power systems.

Product Overview

High-Efficiency Solar Solution

This high-efficiency monocrystalline solar panel is engineered for optimal energy conversion in both residential and commercial applications. Built with white tempered glass and a weather-proof film, it offers robust protection against severe environmental conditions. Integrated bypass diodes ensure reliable performance even when partially shaded, making it a dependable choice for grid-connected systems.

Technical Construction

Materials

- White tempered glass
- EVA resin
- Weather proof film
- Anodized aluminum frame

Performance & Features

Key Features

Monocrystalline, Bypass Diode, Waterproof, Grid-Ready

Warranty & Reliability

Guarantee Period

10 years
