

High-Efficiency Photovoltaic Solar Panel

This high-efficiency photovoltaic solar panel is designed for renewable energy generation. Encapsulated in a durable, weather-resistant material, it ensures long-term performance and reliability in various environmental conditions.

Product Overview

High-Efficiency Photovoltaic Solar Panel

This high-efficiency photovoltaic solar panel is engineered for optimal sunlight absorption and reliable electricity generation. Built with a robust anodized aluminum frame and weather-resistant materials, it is designed to withstand severe environmental conditions. Featuring integrated bypass diodes to minimize power loss from shading, this panel is a durable and effective solution for residential, commercial, and industrial grid-connected applications.

Technical Specifications

Performance Features

- Bypass diode for shade power drop minimization
- Waterproof design
- Suitable for grid-tied applications

Durable Construction

White Tempered Glass, EVA Resin, Weather Proof Film, Anodized Aluminum Frame

Warranty and Compliance

Product Guarantee

10 years
