

High Explosive PYX

PYX is a high explosive compound. It is utilized in applications requiring a powerful explosive.

Product Overview

High-Performance Energetic Material

PYX is a high-performance explosive compound recognized for its thermal stability and reliability in demanding environments. This material is specifically designed for applications requiring high explosive output while maintaining safety during handling and storage. It serves as a critical component in advanced industrial and research-based energetic systems.

Technical Classification

Explosive Type	High Explosive, Heat Resistant
