

# High-Frequency Compression Driver with Threaded Throat

This high-frequency compression driver is designed for professional audio applications. It features a threaded throat for easy mounting to horns and waveguides.

## Product Overview

### Professional High-Frequency Performance

This high-frequency compression driver is engineered for demanding professional audio applications, including sound reinforcement and public address systems. Featuring a robust construction, it ensures durability and consistent output in high-end loudspeaker enclosures. The unit is designed to deliver clear, detailed high-frequency reproduction with minimal distortion, making it an ideal component for critical listening environments.

## Technical Specifications

### Key Performance Features

- High-frequency detailed reproduction
- Low distortion output
- Robust construction for durability
- Easy horn and waveguide integration

### Mounting Interface

Threaded Throat

### Primary Applications

Sound Reinforcement, Public Address Systems, Loudspeaker Enclosures
